

Light Cured Repair Sealant for Glaze

CeraFixe LCA is a light cured acrylic repair compound that is used to repair and fill minor crack and pinhole defects on the surface of Sanitaryware Glaze and porcelain articles. **CeraFixe LCA** has excellent hardness and adhesion to the surface. It is chemically stable and non yellowing. Unlike 2 component system **CeraFixe LCA** is instantly cured by an LED torch. **CeraFixe LCA** is available in all standard colors like White, Ivory, Blue, Pink. We at Omnax Corporation work closely with the end user to develop a compound that matches the color of their glaze.

Technical Specifications

Chemical composition:	Nano Acrylic Polymer
Physical form:	Viscous Paste
Specific Gravity:	1.07 ~ 1.10
Color:	White & light color shades
Curing Light:	LED-D torch
UV LED Wavelength:	370~400 nms
Curing time (max):	30-45 sec.
Packaging:	2 gm
Flash point:	Not applicable
Solvents:	None
Shore D hardness:	> 60
Toxicity:	Negligible
Shelf life:	12 months

Special instructions

It is best to clean the glaze surfaces for improved adhesion. Uncured paste can be easily wiped off using common solvents like Isopropyl Alcohol, Acetone, Ethyl Acetate and Xylene.
